Documentación de clases e interfaces

@author nombre del autor
@version identificación de la versión y fecha
@see referencia a otras clases y métodos

Documentación de constructores y métodos

@param nombre del parámetro descripción de su significado y uso
@return descripción de lo que se devuelve
@exception nombre de la excepción excepciones que pueden lanzarse
@throws nombre de la excepción excepciones que pueden lanzarse
(**@exception** y **@throws** se pueden usar indistintamente).
@deprecated Marca el método como obsoleto. Solo se mantiene por compatibilidad.
@since Indica el nº de versión desde la que existe el método.

Documentación de atributos

Ninguna etiqueta es obligatoria.

El copyright

Se coloca en la parte superior del código

Generación de elementos de javadoc

En eclipse si nos colocamos encima de un método, atributo o en la propia clase, podemos pulsar con el botón derecho
source → generate element comment

Generación de la página web javadoc

En Eclipse pulsando el menú:

Project → Generate javadoc

Etiquetas especiales

@NOTE - Indicates any kind of note about something relevant enough to be noteworthy, but that doesn't involve an action.

@TODO - Indicates something that needs to be done, but that isn't a fix (may or may not be important).

@TOFIX - Indicates something that needs fixing (may or may not be broken).

@HACK - Indicates a quick-fix or workaround that was done, either by necessity or convenience, and that should be replaced or improved if possible.

@DONE - An alert that something was done, either as expected (replacing a previous TODO, TOFIX, or HACK), or unexpectedly (someone spotted something new that needed correction or could be improved, and #LikeABoss, just went and DONE it).

@UNDO - Indicates something that became broken after being changed, and that (at least for now) needs to be rolled back to a previous version.

@UNDONE - Indicates something that was de facto (already) rolled back to a previous version, for whatever reason.

@ASAP - Indicates something that needs attention or doing As Soon As Possible.

@ISSUE - Indicates any kind of issue that needs attention or reviewing, possibly by others if working on a team (needs peer-reviewing).

@GLITCH - Indicates something where a situation on the input or flow of the program leads to weird or unexpected behavior, but that doesn't outright break the program, or

it's output's data.

@BUG - Indicates something where a situation on the input or flow of the program leads to outright breaking of the program (freeze, crash or other severe problem) or of the output (failing to output, or outputting wrong data).
